

## **CUSTOM MADE SOLUTIONS FOR INDUSTRY**

### **- water treatment -**

#### **PACKAGE WATER TREATMENT SYSTEMS**

Aquafelix is the specialist of containerized water purification systems enabling a fast implementation and mobility for time and place restricted conditions. The ergonomic design with thermal insulation, air conditioning and industrial type floor covering ensures a user friendly operation even in geographical locations with severe climatic conditions. Other options such as additional access doors for operators are possible if required by customer.

#### **PACKAGE WASTE WATER TREATMENT SYSTEMS**

Designed for biological treatment of residential waste water, Aquafelix package systems offers ease of installation with minimal costs for investment, operation and maintenance.

Thanks to its pre-engineered modular concept ( extended aeration of activated sludge or moving bed bio reactor ), these systems are used for a wide range of capacities.

#### **SYSTEMS PRE-INSTALLED ON SKID OR INSIDE CABINET**

Aquafelix offers compact solutions for its customers by combining and pre-installing various system components ( pumps, filtration units, membrane and EDI modules, instrumentation, etc...) on a robust skid or inside a cabinet. This enables a fast implementation of the system on site, but also a more professional concept according to international standards—especially for hydraulic conducts ( piping ) and electric connections ( cabling ) —
